

2025: two long status episodes dominate the estimate

F + P + D | Same full-year denominator | Exclusion is a sensitivity scenario, not a corrected truth

Blue: all disclosed episodes. Green: exclude incident IDs 2328579188430287 and 2258210444252287.

Horizontal axis is truncated to 90-100%. Long status intervals do not mean every request failed throughout.

Other overlapping incidents remain included; intervals are re-unioned after exclusion.
